

What You Need To Know

- Most fire deaths are caused by SMOKE - not flames.
- Most fire deaths and injuries occur at NIGHT between midnight and 8 a.m. while victims are asleep.
- The earlier you are alerted to a fire, the more likely it is that you will get out in time.
- Smoke alarms won't prevent fires - but they will increase your chances of getting out and calling the fire department.

When Purchasing a Smoke Alarm, Check for:

- UL - listing
- Hush Feature
- Ten Year Lithium Battery
- Malfunction Signal
- Loud Alarm

Install Smoke Alarms
In Every Home
On Every Level
Outside Each
Sleeping Area
And
In Every Bedroom

*The presence of a smoke alarm
alone does not guarantee fire
safety -*

It must work!

- Replace old alarms. Smoke alarms ten years old or older need to be replaced.
- Test your smoke alarms monthly.
- Vacuum your alarms monthly to remove dust and cobwebs.
- Alarms should never be disconnected and batteries should never be removed for other uses.

How Do Smoke Alarms Work?

- Three types of smoke alarms:
 - Ionization
 - Photoelectric
 - Combination
- Which is better?
Ionization or Photoelectric
Both types are equally effective.
- Either batteries or household current can power smoke alarms.
- There are many models of smoke alarms available, including some for the hearing impaired.

Oregon's Smoke Alarm Law

- **Effective June 23, 1999,**
all ionization smoke alarms
 - Must include a "hush" mechanism.
 - Must have a 10-year battery if solely battery-powered.

- **Effective January 1, 2002,**
 - All tenant occupied dwellings must meet the new requirements.
 - Dwellings must meet the new requirements before title is conveyed for real property.
